

## About

I'm an ambitious and forward-thinking web developer with a keen interest in modern front end practices. My passion for development stems from an innate fascination with the connection between, people, technology and information. Through my work I endeavour to make the connections between these three entities simpler and more harmonious.

## Education

### Oxford Brookes University

Media Technology First Class Honours Degree

### Peter Symonds College Winchester

Art, Media Studies, English Language

### Henry Beaufort School Winchester

10 GCSEs Grade A\* - C

## Experience

### Front End Developer **graze.com**

Aug 2014 - Present

During my time at graze.com I've been involved in re-writing the CSS framework as part of a team whilst modernising the website's JavaScript using CommonJS modules and Browserify. My day to day duties include developing the website UI to support commercial projects whilst focusing on code modularity, reusability and scalability in an agile team of software developers.

### Lead Developer **eight&four**

Aug 2012 - Aug 2014

Joining eight&four as a Junior Developer, I moved quickly within the agency to establish myself as the Lead Developer within nine months. Heading up the technical output of the agency, my main responsibilities included developing, testing and deploying primarily WordPress built websites. Other responsibilities as the senior developer on the team involved scoping out new projects with clients, writing technical specifications and bringing technical innovation to the agency.

During my time at eight&four, I was involved in work for clients such as the RSPCA, EchoFalls, Freesat, Cosmopolitan and Solarcentury.

### Web Developer/Designer Intern **The Reese Group**

Jul 2011 - Sep 2011

Working for the ReesGroup, I was primarily responsible for the redesign, expansion and re-launch of [www.worldofswimming.co.uk](http://www.worldofswimming.co.uk). Re-branding the website and expanding its functionality gave me valuable experience as an in-house designer and developer and generated momentum that I took forward to my final year of university and then into the start of my career.
